

We rely on a great team!

We are looking for m/w:

Title: Head of Software Development

Reports to: Chief Technology Officer

Location: pref. Bangalore, India (alt. Munich, Germany)

Starting as soon as possible

Job Responsibilities:

Position Summary:

The Head of Software development will lead, manage and monitor Cunesoft's globally distributed software development team and supporting them in building innovative regulatory software solutions for the life sciences industry.

The individual will develop and implement a strategy for the team to meet the company's goals and objectives, and to improve the the quality to deliver internally and externally.

Furthermore she/he will assume responsibility for the implementation, quality and technical approach taken by team members and ensuring that development packages are delivered on time.

Important also will be the creating and maintaining of a professional culture within the team, where individuals take ownership and seek to deliver excellence and quality.

In addition to leadership and management skills, the individual should have several years of experience developing with Microsoft .NET, JavaScript and SQL. Desirable is knowledge in NLP, Python or Neural Networks.

Major Responsibilities:

- Lead, mentor, and continue to build a team of top software engineers in an agile environment
- Maintain a best-in-class engineering team supported by an internal environment based upon teamwork, innovation, and dedication to quality
- Work closely with the other engineering and product leadership departments to architect solid technical design and approach to software development in a large-scale environment.
- Lead by example, care for your team, and establish credibility with the quality of your and your team's technical execution.

- Participate in product and project design and scrum retrospective meetings
- Monitor the activities of the software engineering team to remove any roadblocks and ensure timely completion of all work tasks
- Ensure accurate and high quality documentation
- Monitor quality control cycles and regression testing

Experience/Skills:

- A senior level software developer with strong and successful technical lead experience
- Experience of leading a team of developers
- Advanced level (knowledge and hands-on experience) of Microsoft .NET
- Advanced level (knowledge and hands-on experience) of Agile/SCRUM software development methodologies
- Extensive knowledge of Microsoft Visual Studio as well as Microsoft Team Foundation Server
- Previous experience working with Microsoft SQL Server, preferably Microsoft SQL Azure
- Previous experience in the Life sciences area a definite plus
- Understanding and previous experience with GxP and / or 21 CFR Part 11 is a plus

Education:

- University degree in Information Systems, Computer Science, Web Systems, Electrical Engineering, Mathematics or domain related working experience
