

Cunesoft expands Client Success program on a global scale

Munich, Germany & Princeton, NJ

30-January-2018

Cunesoft, the Munich-headquartered global leader for intelligent regulatory solutions to the life sciences industry, is proud to announce the globalization of its Client Success program.

Founded in 2013, Cunesoft currently has more than 40 customers globally in the area of pharmaceuticals, consumer product goods, generics, biotechs, clinical research organizations, API producers and regulatory services organizations. Each of the customers has implemented the cloud-based Cunesoft Regulatory Operations software system to better manage their compliance requirements.

With the rapid growth of Cunesoft's family of customers, Cunesoft's Client Success program has also grown to serve these customers around the world. Under the leadership of Donna Whiting as Head of Client Success, the program now includes staff in North America, Europe and India. Whiting, who previously spent over 30 years working at AstraZeneca and held the title of Director & Group Manager, Global Submissions Management, brings substantial knowledge and experience to her role. "I am so proud and excited to be a part of Cunesoft and leading the Client Success program here," says Whiting. "While our clients find the Cunesoft software easy to use, they often struggle with other questions and I'm glad that the Client Success team is so eager to share their knowledge with them."

Rainer Schwarz (CEO – Cunesoft GmbH) adds "2017 was a year of significant growth for Cunesoft. With the evolving regulatory landscape and requirements to understand complex topics like eCTD, having Donna lead our Client Success program is essential to the success of our customers. Only Cunesoft is willing and able to offer our clients a compliance guarantee when they join our customer family."

About Cunesoft:

Cunesoft GmbH is a provider of intelligent regulatory software and services for all segments within the life sciences industry. Solutions include management of eCTD, xEVMPD, IDMP data and document management as well as regulatory information management (RIM). Automated data mining based on NLP and Deep Learning algorithms complement the product portfolio. Software provisioning is provided as Private Software as a Service (SaaS). The company is headquartered in Munich (Germany) with international offices in France, US and India. For more information, visit www.cunesoft.com.
