The individual should be self-motivated, creative and proactive, to work successfully in a fast-paced environment including diverse technologies, lab as well as cloud environments. The individual will work closely with developers, project managers engineers and other stakeholders throughout the organization. The individual should have a found understanding of the Microsoft .NET and SharePoint Platform. The candidate should have been part of SDLC and exposure to product development is an addition.

Job Responsibilities:

- Interact with product management, project management and development teams to develop modules and functions within the Platform
- Build Technical specification documents
- Design and create solutions for pre-specified modules and functions as per the requirements
- Define, create and execute automated test cases, i.e. unit tests
- Participate in troubleshooting and triaging of issues with different teams to drive towards root cause identification and resolution
- Support production deployment of applications and perform "validation testing" during the off-hours maintenance windows
- Support and fix existing and new identified issues by either customers or internal test teams.
- Help junior members in the team to get them up to speed and train them in coding practices

Minimum Training:

- 5 to 8 years of experience in development
- Microsoft .NET / C#, Microsoft SharePoint 2010
- Microsoft Visual Studio as well as Microsoft Team Foundation Server
- Database Tools, preferably Microsoft SQL Server
- Cloud based environments with Microsoft SharePoint
- Technical background
- Previous experience in the Life sciences area a definite plus
- Analytical
- Problem Solving
- Excellent Verbal & Written Communication
- Must be flexible, independent and self motivated
- Punctual, Regular and consistent attendance

Education:

Bachelor of Engineering / Master of Computer Application or any equivalent degree
